

# Atlassian Product Releases Macro

<b>Macro Summary</b>	A Confluence user macro that displays the latest Atlassian product release versions (with release notes), and release dates.
<b>What it looks like</b>	<b>Latest product versions</b>

The Latest Atlassian Product Releases works by querying [www.atlassian.com](http://www.atlassian.com)'s JSON resources, at URLs such as <https://my.atlassian.com/download/feeds/current/jira-software.json>. The jQuery code can be found on [bitbucket](#) – improvements welcome.

## Installation

To add this to your Confluence:

1. Log in as an administration
2. Search for 'user macros'

3. Create a new macro called **atlassianversions**:

## Create User Macro

### Macro Browser Information

Macro Name\*   
Macro names are converted to lower case

Visibility  Visible to all users in the Macro Browser  
 Visible only to system administrators in the Macro Browser

Macro Title\*

Description

Categories

In the body, fill in:

```

## @noparams

<h4>Latest product versions</h4>
<table id="productTable"></table>
<!-- Chrome refuses to load because Bitbucket sets the MIME type to text/plain, not text/javascript:
<script type="text/javascript" src="https://bitbucket.org/redradish/atlassian-versionscraper/raw/master
/createversiontable.js" -->
<script type="text/javascript" src="https://www.redradishtech.com/src/atlassian-versionscraper
/createversiontable.js">
// This line intentionally left blank - https://answers.atlassian.com/questions/21353/cant-use-script-
tag-in-user-macros
</script>

```

i.e.:

**Definition of User Macro**

Macro Body  No macro body

Processing  Escaped

Unrendered

You should use this option for bodies that are processed within the template before being output. Ensure that HTML is ultimately output by the template.

Rendered

The body will be rendered so most HTML entered will be passed to the template unmodified but Confluence specific mark up such as macro definitions will be rendered.

Template <sup>\*</sup> `## @noparams`

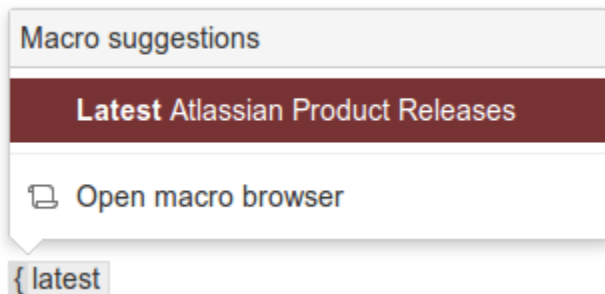

```

<h4>Latest product versions</h4>
<table id="productTable"></table>
<!-- Chrome refuses to load because Bitbucket sets the MIME type to text/plain, not text/javascript: <script
type="text/javascript" src="https://bitbucket.org/redradish/atlassian-versionscraper/raw/master/createversiontable.js" -->
<script type="text/javascript" src="https://www.redradishtech.com/src/atlassian-versionscraper/createversiontable.js">
// This line intentionally left blank - https://answers.atlassian.com/questions/21353/cant-use-script-tag-in-user-macros
</script>

```

4. Save the macro.

Then on a test page, insert the macro:

Done! You might also like to [display this on your Confluence dashboard](#).
