

General

- [Dropbox to Amazon S3 Syncer](#) — Over on Github https://github.com/redradishtech/dropbox_to_s3_syncer I've published a Docker-based system for syncing a Dropbox folder with a S3 bucket. Drop a file in a designated Dropbox subdirectory, and it is automatically uploaded to S3.
 - [Dropbox Installation error: Trouble connecting to Dropbox servers](#)
- [-Duser.timezone considered harmful, and why your Atlassian server shouldn't be on UTC](#)
- [Parsing JIRA JSON dates](#) — strptime code for parsing dates as found in JIRA REST API results.
- [PostgreSQL](#)
 - [Encoding HTML in PostgreSQL](#) — this function is the best way to encode HTML in PostgreSQL
- [Temporarily Switching Users in Jira/Confluence](#) — A quick JSP allowing administrators to temporarily take on the identity of a user. Versions for JIRA and Confluence.
- [Using database diffs to see what JIRA is doing](#) — This is a small but very, very useful tip. Often there's situations where you need to know what happened in the database, for a particular JIRA operation (or any database-using webapp). This is how you do it.
- [Versioning your JIRA and Confluence app directories](#) — I recently published https://hg.sr.ht/~redradishtech/versioned_directories https://hg.sr.ht/~redradishtech/versioned_directories, a script to manage the seemingly trivial task of keeping a `/opt/atlassian/jira/current` symlink pointing to the correct `/opt/atlassian/jira/$version`; or more generally, managing a directory containing N versions of something.
